

Amendments to the Abstract:

Please delete the Abstract and replace it with the following new Abstract:

5 A system for packing and sealing a data medium cover includes a collapsible package having front and rear panels configured for sandwiching the cover therebetween, and two end walls interconnecting the front and rear walls for defining, in an uncollapsed state, a sleeve for receiving the cover through an open end. The front panel has at the open end an adhesive contacting area. A sealing label is provided, having on one surface an adhesive coating for permanently adhering to the adhesive contacting area and for releasably adhering to the cover. The label extends from 10 the adhesive contacting area around an exposed end wall of the cover and along the one surface of the cover, being juxtaposed with the rear panel when the cover is received within the package for contacting the one surface of the cover and adhering thereto at a position behind the rear panel.

Amendments to the Drawings:

Amendments to the drawings are set forth in the replacement drawing sheets attached hereto, showing corrections to Figures 2, 2b, 4a, 4b, 4c, 5a, 5b, and 5c.

5
